DETAILED ACTION

Allowable Subject Matter

1. Claims 1-6 are allowed.
2. The reasons for allowance have been presented in the Notice of Allowance mailed on December 01, 2006. Since the mailing of that Office action Applicants have filed a Request for Continued Examination, but have not amended the claims, although they have filed an Information Disclosure Statement (IDS). The IDS lists two references White '516 and Drummond (WO-95/28634). White '516 has already been cited by the Examiner and was commented on in the Notice of Allowance. As stated therein, "White assumes a constant diffusion coefficient. See col. 01:48 – col. 02:26." Applicants' only independent claim, claim 1, requires "(2) means for measuring from the cell current the diffusion coefficient of a redox mediator in the cell and independently its concentration." Such a means is not necessary if the diffusion coefficient is assumed to be constant. Drummond also does not disclose means for measuring from the cell current the diffusion coefficient of a redox mediator in the cell and independently its concentration. Drummond improves the concentration measurement by either subtracting a measurement taken at the start of the test from a measurement taken at the end of the test or by using a pair of working electrodes at different potentials so that contribution of

interferants to the measurement current can be subtracted from the measurement current. See page 11, last paragraph, bridging to page 12 and the last paragraph on page 12, bridging to page 13.
